

CLEAR, TRANSLUCENT & SKIN TONE EARPIECES
FOR YOUR HEARING INSTRUMENT

I'm Listening

But you'll never guess how. I pop in my hearing instrument and abracadabra! Like magic. It disappears. Gone. Vanished! Right before your eyes. Sure I'm listening with some assistance, but with DisappEar™ — you don't have a clue.

 **Westone**

Are You Listening?

DisappEar™ from Westone® uses a remarkable *conceal technology* — imbedded microfibers which replicate the capillaries of the human ear — to create a nearly invisible earmold. Available in several skin tones and your choice of hard acrylic or soft silicone materials, DisappEar™ works just like camouflage to break up the outline and reflection of an earmold, so it blends seamlessly with your complexion. Custom-fit Westone® earmolds are also available in clear and translucent materials, as well as a wide variety of opaque skin tones. See your hearing healthcare professional and ask about our *conceal technology*. ***You'll want to listen.***

**Uncomfortable?
Self-conscious about wearing
a hearing instrument?**

Custom-molded from an impression of your ear, DisappEar™ and our other conceal technologies virtually vanish when inserted in your ear. Westone® delivers the best hearing solutions — you'll never see.

DisappEar's™ unique manufacturing process imbeds camouflaging microfibers in earmold material.

Available in several colors to blend with almost any skin tone.

Available in soft silicone or hard acrylic materials with a non-glare satin finish that is unobtrusive in the ear.

Earmolds are also available in a wide variety of clear, translucent and opaque skin tones.

Westone's® newest silicone earmold material, OtoClear,™ has a water-clear appearance.
