

Remember

**Hearing is not only an issue for the elderly.
Hearing is a health and a quality of life issue.**

Don't wait for a hearing impairment to become a problem – contact your Hearing Care Professional now:

Bernafon's mission is to help people to hear and communicate better by providing Innovative Hearing Solutions.

Hearing instruments are designed to meet individual hearing needs. They cannot restore normal hearing or slow the onset of hearing loss. The overall benefit of hearing instruments depends on the listening environment, fit, frequency of use, hearing loss characteristics and severity, as well as the accuracy of the client evaluation and the hearing instrument response settings.

to hear them again!**

3 excellent reasons to Smile

Smile Plus for superior sound quality

Smile Plus uses cutting edge digital technology that provides you with crisp and clear sound quality.

Smile Plus for a variety of different listening situations

All Smile Plus hearing instruments have two listening programs. It's like having two hearing instruments in one! You can easily access the different programs via a small remote control or a switch on the hearing instrument.

Some Smile Plus hearing instrument models have dual-microphone technology to fight the negative effects of background noise. Activation of this will make signals from in front, such as someone speaking, sound clearer than noise from behind.

Smile Plus is versatile in its operation

In the same way that people choose to drive a manual or automatic car, with Smile Plus you also have the choice of control over your hearing instrument.

Smile Plus hearing instruments can be configured to operate:

- Automatically – switch it on and let the technology go to work
- With switches on the hearing instrument
- With an optional, small and easy to use remote control.

Only Smile Plus offers such a range of options.

Every person is unique. So is each hearing loss.

Smile Plus hearing instruments can be adjusted to compensate for virtually any hearing loss to provide you with your own unique solution. Smile Plus uses the latest digital technology, enabling your Hearing Care Professional to customize your hearing instrument to precisely meet your own hearing and lifestyle needs.

A variety of accessories are also available for each instrument.

Ask your Hearing Care Professional about what is best for you!

Smile Plus – a wide range of instruments. Optional remote control for each model.
